

## Magnet PSU Hardware Limits

Notes from J. Boehm

- The magnets are currently off and the maximum current is presently set to 0.
- The maximum currents for the spectrometer solenoids and the FC are 220A and 180A respectively
- However, it is expected that the magnets will be operating at lower currents in the coming cycle(s)
- When the magnets are to be run up, it is agreed that the procedure will be:
  - agree on a setting
  - set the hardware limit to the maximum current + 5 A ( by J. Boehm or nominated expert)
  - document it (by J. Boehm or nominated expert)
